▲ Largest Contentful Paint element - 2,680 ms

This is the largest contentful element painted within the viewport. <u>Learn more about the Largest Contentful Paint element [LCP]</u>

Phase	% of LCP	Timing
TTFB	17%	460 ms
Load Delay	0%	0 ms
Load Time	0%	0 ms
Render Delay	83%	2,220 ms

■ Serve static assets with an efficient cache policy — 2 resources found

Category	Time Spent
Style & Layout	345 ms
Other	300 ms
Script Parsing & Compilation	52 ms
Parse HTML & CSS	50 ms
Rendering	10 ms
Garbage Collection	6 ms

## ○ Avoid long main-thread tasks − 6 long tasks found

Lists the longest tasks on the main thread, useful for identifying worst contributors to input delay.

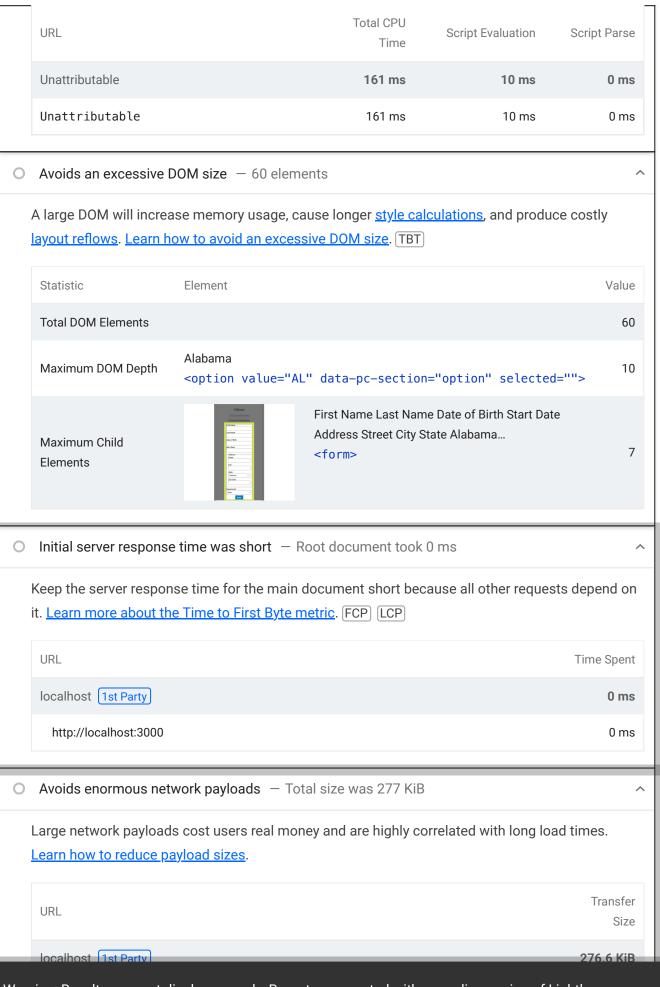

<u>Learn how to avoid long main-thread tasks (TBT)</u>

URL	Start Time	Duration
localhost 1st Party		798 ms
js/main.67c209b5.js (localhost)	2,595 ms	245 ms
js/main.67c209b5.js (localhost)	2,414 ms	181 ms
js/main.67c209b5.js (localhost)	2,840 ms	171 ms
http://localhost:3000	612 ms	75 ms
js/main.67c209b5.js (localhost)	3,011 ms	74 ms
css/main.4029b460.css (localhost)	1,514 ms	52 ms

## ○ JavaScript execution time − 0.5 s

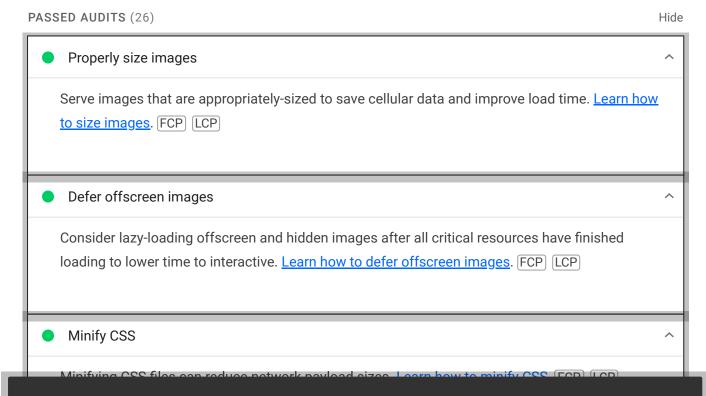

Consider reducing the time spent parsing, compiling, and executing JS. You may find delivering smaller JS payloads helps with this. <u>Learn how to reduce Javascript execution time</u>. (TBT)

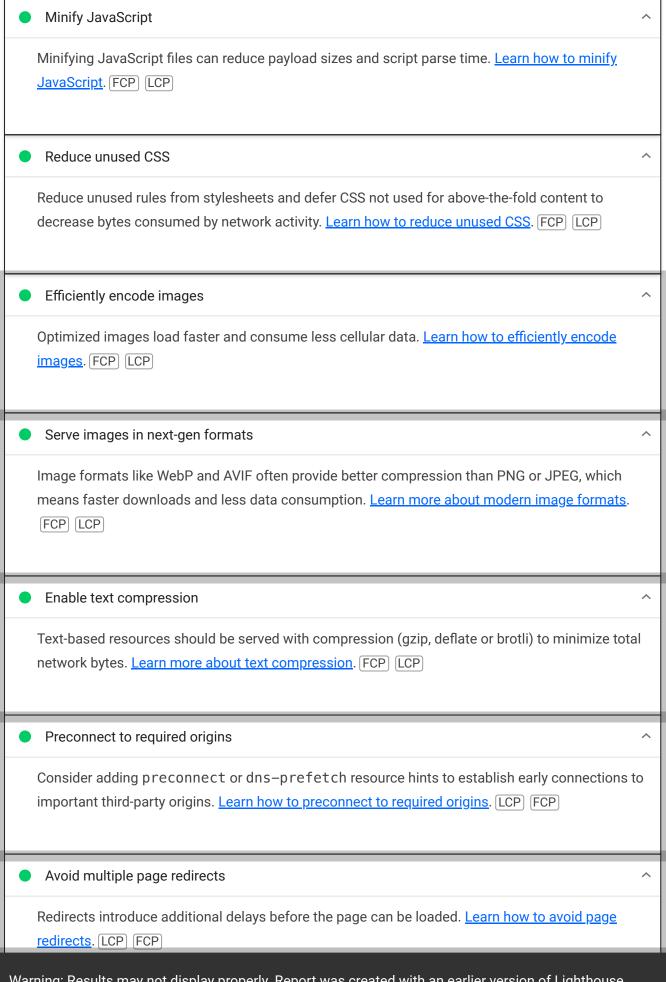

URL	Total CPU Time	Script Evaluation	Script Parse
localhost 1st Party	1,067 ms	455 ms	52 ms
js/main.67c209b5.js (localhost)	524 ms	449 ms	52 ms

URL	Transfer Size	
/logo192.png (localhost)	5.5 KiB	
/favicon.ico (localhost)	3.7 KiB	
http://localhost:3000	0.9 KiB	
/manifest.json (localhost)	0.8 KiB	
Avoid chaining critical requests — 1 chain found   The Critical Request Chains below show you what resources are loaded with a high priority.  Consider reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. Learn how to avoid chaining critical requests.		
Maximum critical path latency: <b>58.714 ms</b> Initial Navigation  http://localhost:3000 css/main.4029b460.css (localhost) - <b>46.117 ms, 54.43 KiB</b>		

More information about the performance of your application. These numbers don't <u>directly affect</u> the Performance score.

HTTP/2 offers many benefits over HTTP/1.1, including binary headers and multiplexing. <u>Learn</u> <u>more about HTTP/2</u> . <u>LCP</u> <u>FCP</u>
Use video formats for animated content     ^
Large GIFs are inefficient for delivering animated content. Consider using MPEG4/WebM videos for animations and PNG/WebP for static images instead of GIF to save network bytes. Learn more about efficient video formats FCP LCP
Remove duplicate modules in JavaScript bundles
Remove large, duplicate JavaScript modules from bundles to reduce unnecessary bytes consumed by network activity. FCP LCP
O Preload Largest Contentful Paint image
If the LCP element is dynamically added to the page, you should preload the image in order to improve LCP. <u>Learn more about preloading LCP elements</u> . <u>LCP</u>
O User Timing marks and measures
Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. <u>Learn more about User Timing marks</u> .
Consider instrumenting your app with the User Timing API to measure your app's real-world
Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. <u>Learn more about User Timing marks</u> .
Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. Learn more about User Timing marks.  All text remains visible during webfont loads  All text remains visible during webfont loads  All text remains visible during webfont loads
Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. Learn more about User Timing marks.  All text remains visible during webfont loads  Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading.  Learn more about font-display.
Consider instrumenting your app with the User Timing API to measure your app's real-world performance during key user experiences. Learn more about User Timing marks.  All text remains visible during webfont loads  Leverage the font-display CSS feature to ensure text is user-visible while webfonts are loading. Learn more about font-display.  Minimize third-party usage  A  Third-party code can significantly impact load performance. Limit the number of redundant third-party providers and try to load third-party code after your page has primarily finished loading. Learn

Largest Contentful Paint image was not lazily loaded
Above-the-fold images that are lazily loaded render later in the page lifecycle, which can delay the largest contentful paint. Learn more about optimal lazy loading. LCP
O Avoid large layout shifts
These are the largest layout shifts observed on the page. Each table item represents a single layout shift, and shows the element that shifted the most. Below each item are possible root causes that led to the layout shift. Some of these layout shifts may not be included in the CLS metric value due to windowing. Learn how to improve CLS CLS
Uses passive listeners to improve scrolling performance
Consider marking your touch and wheel event listeners as passive to improve your page's scroll performance. Learn more about adopting passive event listeners.
Avoids document.write()
For users on slow connections, external scripts dynamically injected via document.write() can delay page load by tens of seconds. Learn how to avoid document.write().
O Avoid non-composited animations
Animations which are not composited can be janky and increase CLS. Learn how to avoid non-composited animations CLS
Image elements have explicit width and height
Set an explicit width and height on image elements to reduce layout shifts and improve CLS. <u>Learn</u> <u>how to set image dimensions</u> <u>CLS</u>
● Has a <meta name="viewport"/> tag with width or initial—scale
A <meta name="viewport"/> not only optimizes your app for mobile screen sizes, but also prevents a 300 millisecond delay to user input. Learn more about using the viewport meta tag.
Warning: Results may not display properly. Report was created with an earlier version of Lighthouse (12.1.0). The latest version is 12.2.1.

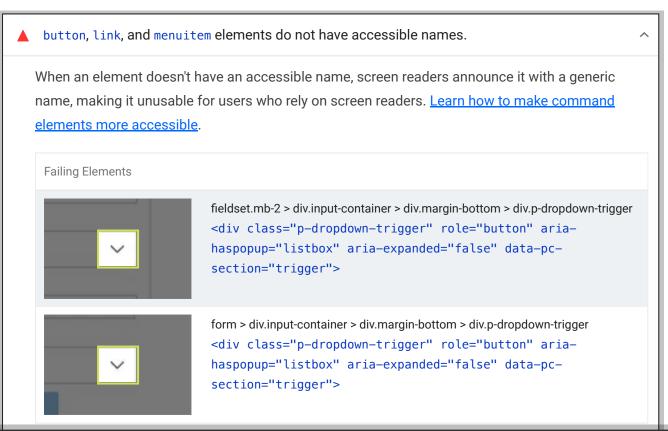

Many navigations are performed by going back to a previous page, or forwards again. The back/forward cache (bfcache) can speed up these return navigations. <u>Learn more about the bfcache</u>

## Accessibility

These checks highlight opportunities to improve the accessibility of your web app. Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so manual testing is also encouraged.

#### **ARIA**

Form elements do not have associated labels

Labels ensure that form controls are announced properly by assistive technologies, like screen readers. Learn more about form element labels.

#### Failing Elements

div.create-employee-container > form > div.input-container > input.margin-

<input class="margin-bottom p-inputtext p-component"</pre> name="firstName" required="" data-pc-name="inputtext" datapc-section="root" value="">

div.create-employee-container > form > div.input-container > input.margin-

<input class="margin-bottom p-inputtext p-component"</pre> name="lastName" required="" data-pc-name="inputtext" datapc-section="root" value="">

form > div.input-container > span.margin-bottom > input.p-inputtext <input class="p-inputtext p-component p-inputtext p-</pre> component" name="dateOfBirth" type="text" role="combobox" autocomplete="off" aria-expanded="false" ariaautocomplete="none" aria-haspopup="dialog" aria-

controls="pr\_id\_5\_panel" inputmode="none" data-pc-name="inputtext" data-pcsection="root">

form > div.input-container > span.margin-bottom > input.p-inputtext <input class="p-inputtext p-component p-inputtext p-</pre> component" name="startDate" type="text" role="combobox" autocomplete="off" aria-expanded="false" ariaautocomplete="none" aria-haspopup="dialog" aria-

controls="pr\_id\_6\_panel" inputmode="none" data-pc-name="inputtext" data-pcsection="root">

form > fieldset.mb-2 > div.input-container > input.margin-bottom <input class="margin-bottom p-inputtext p-component"</pre> name="street" required="" data-pc-name="inputtext" data-pcsection="root" value="">

form > fieldset.mb-2 > div.input-container > input.margin-bottom <input class="margin-bottom p-inputtext p-component"</pre> name="city" required="" data-pc-name="inputtext" data-pcsection="root" value="">

These are opportunities to improve the semantics of the controls in your application. This may enhance the experience for users of assistive technology, like a screen reader.

ADDITIONAL ITEMS TO MANUALLY CHECK (10) Hide Interactive controls are keyboard focusable Custom interactive controls are keyboard focusable and display a focus indicator. Learn how to make custom controls focusable. Interactive elements indicate their purpose and state Interactive elements, such as links and buttons, should indicate their state and be distinguishable from non-interactive elements. Learn how to decorate interactive elements with affordance hints. The page has a logical tab order Tabbing through the page follows the visual layout. Users cannot focus elements that are offscreen. Learn more about logical tab ordering.

Visual order on the page follows DOM order

DOM order matches the visual order, improving navigation for assistive technology. Learn more about DOM and visual ordering.

User focus is not accidentally trapped in a region

A user can tab into and out of any control or region without accidentally trapping their focus. Learn how to avoid focus traps.

The user's focus is directed to new content added to the page

O HTML5 landmark elements are used to improve navigation	^
Landmark elements ( <main>, <nav>, etc.) are used to improve the keyboard navigation of the page for assistive technology. Learn more about landmark elements.</nav></main>	
O Offscreen content is hidden from assistive technology	^
Offscreen content is hidden with display: none or aria-hidden=true. Learn how to properly hide offscreen content.	
O Custom controls have associated labels	^
Custom interactive controls have associated labels, provided by aria-label or aria-labelledby. <u>Lea</u> more about custom controls and <u>labels</u> .	<u>rn</u>
O Custom controls have ARIA roles	^
Custom interactive controls have appropriate ARIA roles. <u>Learn how to add roles to custom controls</u> .	

These items address areas which an automated testing tool cannot cover. Learn more in our guide on <u>conducting an accessibility review</u>.

PASSED AUDITS (21)

[aria-\*] attributes match their roles

A

Each ARIA role supports a specific subset of aria-\* attributes. Mismatching these invalidates the aria-\* attributes. Learn how to match ARIA attributes to their roles.

[aria-hidden="true"] is not present on the document <body>

Assistive technologies, like screen readers, work inconsistently when aria-hidden="true" is set on the document <body>. Learn how aria-hidden affects the document body.

[role]s have all required [aria-\*] attributes

A

Some ARIA roles have required attributes that describe the state of the element to screen readers.

[aria-\*] attributes have valid values Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid values. Learn more about valid values for ARIA attributes. [aria-\*] attributes are valid and not misspelled Assistive technologies, like screen readers, can't interpret ARIA attributes with invalid names. Learn more about valid ARIA attributes. Buttons have an accessible name When a button doesn't have an accessible name, screen readers announce it as "button", making it unusable for users who rely on screen readers. Learn how to make buttons more accessible. [user-scalable="no"] is not used in the <meta name="viewport"> element and the [maximumscale] attribute is not less than 5. Disabling zooming is problematic for users with low vision who rely on screen magnification to properly see the contents of a web page. Learn more about the viewport meta tag. ARIA attributes are used as specified for the element's role Some ARIA attributes are only allowed on an element under certain conditions. Learn more about conditional ARIA attributes. [aria-hidden="true"] elements do not contain focusable descendents Focusable descendents within an [aria-hidden="true"] element prevent those interactive elements from being available to users of assistive technologies like screen readers. Learn how aria-hidden affects focusable elements. Elements use only permitted ARIA attributes Using ARIA attributes in roles where they are prohibited can mean that important information is not

[role] values are valid ARIA roles must have valid values in order to perform their intended accessibility functions. Learn more about valid ARIA roles. Background and foreground colors have a sufficient contrast ratio Low-contrast text is difficult or impossible for many users to read. Learn how to provide sufficient color contrast. Document has a <title> element The title gives screen reader users an overview of the page, and search engine users rely on it heavily to determine if a page is relevant to their search. Learn more about document titles. <html> element has a [lang] attribute If a page doesn't specify a lang attribute, a screen reader assumes that the page is in the default language that the user chose when setting up the screen reader. If the page isn't actually in the default language, then the screen reader might not announce the page's text correctly. Learn more about the lang attribute. <html> element has a valid value for its [lang] attribute Specifying a valid BCP 47 language helps screen readers announce text properly. Learn how to use the lang attribute. Links have a discernible name Link text (and alternate text for images, when used as links) that is discernible, unique, and focusable improves the navigation experience for screen reader users. Learn how to make links accessible. No element has a [tabindex] value greater than 0 Warning: Results may not display properly. Report was created with an earlier version of Lighthouse

(12.1.0). The latest version is 12.2.1.

 Touch targets have sufficient size and spacing. Touch targets with sufficient size and spacing help users who may have difficulty targeting small controls to activate the targets. Learn more about touch targets. Heading elements appear in a sequentially-descending order Properly ordered headings that do not skip levels convey the semantic structure of the page, making it easier to navigate and understand when using assistive technologies. Learn more about heading order. Uses ARIA roles only on compatible elements Many HTML elements can only be assigned certain ARIA roles. Using ARIA roles where they are not allowed can interfere with the accessibility of the web page. Learn more about ARIA roles. Deprecated ARIA roles were not used Deprecated ARIA roles may not be processed correctly by assistive technology. Learn more about deprecated ARIA roles. NOT APPLICABLE (34) Hide [accesskey] values are unique Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Learn more about access keys.

[accesskey] values are unique
 Access keys let users quickly focus a part of the page. For proper navigation, each access key must be unique. Learn more about access keys.
 Elements with role="dialog" or role="alertdialog" have accessible names.
 ARIA dialog elements without accessible names may prevent screen readers users from discerning the purpose of these elements. Learn how to make ARIA dialog elements more accessible.
 ARIA input fields have accessible names
 ARIA input fields have accessible names

(12.1.0). The latest version is 12.2.1.

<u>labels</u> .
<ul> <li>ARIA meter elements have accessible names</li> </ul>
When a meter element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn how to name meter elements.
<ul> <li>ARIA progressbar elements have accessible names</li> </ul>
When a progressbar element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn how to label progressbar elements.
Elements with an ARIA [role] that require children to contain a specific [role] have all required children.
Some ARIA parent roles must contain specific child roles to perform their intended accessibility functions. Learn more about roles and required children elements.
O [role]s are contained by their required parent element
Some ARIA child roles must be contained by specific parent roles to properly perform their intended accessibility functions. <u>Learn more about ARIA roles and required parent element</u> .
Elements with the role=text attribute do not have focusable descendents.
Adding role=text around a text node split by markup enables VoiceOver to treat it as one phrase, but the element's focusable descendents will not be announced. Learn more about the role=text attribute.
ARIA toggle fields have accessible names
When a toggle field doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. <u>Learn more about toggle fields</u> .
<ul> <li>ARIA tooltip elements have accessible names</li> </ul>
When a tooltip element doesn't have an accessible name, screen readers announce it with a generic name, making it unusable for users who rely on screen readers. Learn how to name tooltip elements.

	item element doesn't have an accessible name, screen readers announce it with a making it unusable for users who rely on screen readers. <u>Learn more about labelinements</u> .	.g
O The page cor	ntains a heading, skip link, or landmark region	^
	o bypass repetitive content lets keyboard users navigate the page more efficiently.	
<dl>'s contai elements.</dl>	n only properly-ordered <dt> and <dd> groups, <script>, <template> or <div></td><td>^</td></tr><tr><td></td><td>n lists are not properly marked up, screen readers may produce confusing or put.
